## Required industrial site necessary item in the rainy season

Since COAD Speed-Door is waterproof, there is no worry about rust in rain water

The industrial site of the rainy season needs special attention. Because rainwater inflow can cause problems such as machine failure.

Among these reason the Speed-Door of COAD is emerging as a necessary item in the rainy season industrial field. It is fully waterproof and can be used safely in the rainy season.

When the door is closed, the COAD-Series is characterized by closed power because it have not no gaps and the bottom is finished with a safety wall. Therefore, even in the rainy season, where rainfall is high, rainwater or moisture can be completely blocked, which is effective in protecting internal facilities and materials.

The COAD has 13 models of Speed-Door according to the site from COAD-1 (Standard Model) to COAD-13 (Explosion Proof Model). Both the frame and the drum that make up the speed door are made of aluminum and are resistant to deformation and corrosion.

COAD official said “We hope you do not damage in rainy season by installing a Speed-Door.” and “Unlike the speed door which is used in the past, it is made of aluminum and does not rust.”

Detailed product information and introduction of the COAD Speed-Door can be found on the COAD official homepage.
